ENERGY EFFICIENT TERRACE HEATING

What is Sit & Heat?

Sit & Heat is an energy efficient heater, built into cushions. With Sit & Heat you can offer your guest more comfort, more warmth and save up to 95% on energy costs. Sit & Heat is available with an adaptor or with a battery pack (wireless).

How does Sit & Heat work?

Sit & Heat switches on when a person sits on it. Your guests can personally adjust the amount of heat with a push of a button. When the guest leaves the chair, the heat turns off after two minutes.

Customized for every hospitality business

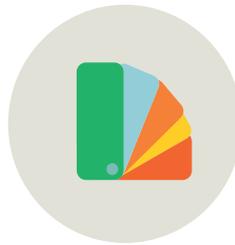

Every hospitality business is unique.

This is why Sit & Heat makes customized cushions for everyone. Sit & Heat fits with wooden lounge benches but also classy chairs.

Sizes

Cushions can be made in any size. Adjustable for benches and also chairs.

Colors

You decide the color of the cushions, so your terrace has the looks that fit your business.

Logo

As a finishing touch we can print your logo on the cushions.

“

Nicky Maas | Lunchroom De Blonde Pater - Nijmegen

“My guest love Sit & Heat. They have an extra reason to visit again. People even visit my terrace in winter”.

”

Saving energy and money

Sit & Heat saves energy and saves money. We are proud to show you the difference between the energy usage of conventional heaters versus the energy usage of Sit & Heat.

For example: a restaurant with 50 seats on the terrace.

	Gas heater	Electric heater	Sit & Heat
Units:	5	8	50
Capacity per unit:	12.000 Watt	2.000 Watt	30 Watt
Total capacity:	60 Kw	16 Kw	1,5 Kw
Energy usage per year:	60.000 Kwh	16.000 Kwh	1500 Kwh
Costs per year:	€ 10.588,33	€ 2.880,-	€ 270,-

* The calculation is based on 1000 hours of usage.

Why Sit & Heat?

Comfort

Your torso area is heated by cushion in the back. This will give you an overall warm feeling. Everyone can personally adjust the heat with a push of a button.

If you do not need the warmth you can easily turn off Sit & Heat.

Sustainability

Sit & Heat only heats the people and not the surroundings, that is why it only uses 30 Watts per seat. It will save up to 95% of energy. The sensor makes sure that Sit & Heat only uses energy when a person sits on it.

No waste of energy!

Cost savings

The return on investment of Sit & Heat is 1 or 2 years depending on the setting of your terrace.

We would love to make a comparison for you!

Not only in the hospitality!

At the office

With Sit & Heat integrated in office chairs the general temperature doesn't have to be that warm. Everyone adjusts their own warmth. Less costs for the employer and more comfort for everyone.

In the stadium

Stadium seats with integrated Sit & Heat are more comfortable and more efficient than the conventional heaters.

In the garden

Even during the evenings and cold days you can enjoy your garden. Sit & Heat cushions are available for every kind of furniture.
